

AGAPANTHUS

'BABY PERIWINKLE'

DRY TOLERANT

The adorable little sister to our favourite dwarf Agapanthus - 'Baby Pete'. She has all the hardiness and strong features of 'Baby Pete', yet with a stunning floral display of soft, cool tones. Bred in Australia and proven to date to be sterile, 'Baby Periwinkle' is a perfect choice both for the home garden and commercial landscaping, even where the threat of potential environmental weeds are a concern. Well suited for low borders and edging, it would make for a perfect addition to brighten up a pathway or garden edge.

FULL SUN

DRY TOLERANT

EDGING

HEIGHT 20CM
SPREAD 40CM

SPACE 30CM APART

FEATURES

- Color break on the hugely popular 'Baby Pete'
- Dwarf variety with compact mound forming foliage and flower stems only reaching to approx. 35cm
- Proven to date to be sterile - no environmental weed threat
- Long flowering - throughout warmer months
- Very dry tolerant once established
- Bred in Australia

USES

- Mass plant as low maintenance ground cover
- Edging paths, drives and other paved surfaces
- Hardy for commercial landscaping or public spaces
- Container displays for hot, sunny locations
- Small gardens, patios and courtyards
- Dry or gravel style gardens
- Great for coastal regions

CARE

Low water requirements, once established. Quite dry tolerant requiring only occasional deep watering during extended periods of heat. Easy to grow in most soil types which are well draining. Apply a slow release fertiliser in spring. No pruning generally required although removing spent flowering stems will encourage further flushes.

ORIGIN: Brisbane, Australia // **SPECIES:** *Agapanthus praecox* spp. *orientalis* // **PROTECTION STATUS:** PBR Protected
