

HEMEROCALLIS

'STELLA BELLA'

GOLDEN FLOWERS

Commonly known as 'Daylily', members of this family are known world wide for their hardiness, beauty and reliability and Hemerocallis 'Stella Bella' is no exception. The golden yellow flowers are produced in great quantities on upright stems. In addition to its beauty this particular variety stands apart from the rest in its remarkable ability to bloom and re-bloom for up to six months of the year.

FEATURES

- Golden yellow flowers produced on long stems
- Remarkable ability to bloom and re bloom for up to six months of the year
- Evergreen, strap-like foliage
- Hardy, beautiful, reliable

USES

- Striking when grown in informal clumps
- Scatter throughout perennial borders
- Attractive and eye catching display when mass planted
- Cover for low maintenance areas

CARE

Low water requirements. Drought tolerant – will benefit from an occasional deep watering during extended dry periods. Choose a full sun location as shade will diminish flower production. No pruning required although removing spent flower stems will encourage further flushes. **CAUTION:** Harmful if eaten
